

Nepal is the most happening destination in the world. It has an exciting blend of distinctive culture preserved for centuries, great adventure and amazing natural beauty. It presents a wonderful variety of tourism magnetism and escapade breaks found nowhere else. Within a distance of only 10 miles, you get to go on a trekking with a spectacular view of mountains to an elephant ride in the tropical forest.

Nepal is the country full of extremes, be it the temperatures, climates or geography. The climate ranges from the tropical to the arctic. The low-land southern region has a maximum altitude of 305m and has a hot and humid climate that can rise above 45 Degree Celsius during summer. Likewise, the mid-land hilly regions are pleasant all the year round, although winter nights fall between 0 and 3 Degree Celsius. The northern mountain region, with an altitude above 3,300m has an alpine climate with considerably lower temperatures below 0 Degree Celsius in winter.

Nepal has four climatic seasons. The spring falls between March and May and the temperature is mildly warm in low lands while moderate in higher altitudes with plenty of opportunities to have the mountain views. It is also the time for flowers to blossom and they sweep the ascending altitudes with its magnanimous color and beauty.

The summer falls between June and August and this is also the monsoon season.

Monsoon

A seasonal wind in southern Asia; blows from the southwest (bringing rain) in summer and from the northeast in winter. in Nepal is not the typical monsoon of Asia. Rain falls more than 1300mm annually usually occur during the night-time leaving the sky clean and clear by the morning making the Himalayan view even more dramatic. The weather is hot and wet at times. It rains almost every day and it spreads the pleasantness around with lush green vegetation.

The autumn is between September and November and is the best season to visit Nepal. With the summer gone by and the winter to set in, the

weather is mild and so are the clear mountain views. This is the season of festivities and peak season for trekking as mountain views are guaranteed.

The winter is between December and February. The weather is cool and the sky is clear with occasional snowfalls at higher elevations. This season is good for trekking in lower elevations. The morning and night is cold and the days are warm when sunny.

This drastic vary in height and climate creates the biggest concentration of animal and plant species in the world. There are about 800 bird species and exotic mammals such as the royal Bengal tiger, snow leopards, as well as rhinoceros, elephants, bears, deer, monkeys and jackals. With overgrowing population density, many of these rare animals are now confined in National Parks.

Nepal is definitely full of breath taking beauty and is the paradise on world. You can marvel yourself over the highest peaks in the world, jewel-like lakes or exotic wildlife. Walking along deep gorges, overwhelmed by magnificent Himalayas in the distance, and speaking with friendly people along the trek is just an unique coincidence of scenery, culture and personal growth.
